Adesh Vishwakarma

Senior Full Stack Developer (Node.js, React.js, AWS, Agentic AI)

Indore, Madhya Pradesh, India | adesh2323@gmail.com | +91 9584515823 | linkedin.com/in/adesh-vishwakarma

SUMMARY

Full stack developer with 8 years of experience, including 6 years building Node.js backends (Express and NestJS) alongside React.js front ends. I build event-driven services on Apache Kafka and AWS SQS/SNS, define AWS infrastructure with CDK and CloudFormation, and deploy to Kubernetes. I work with PostgreSQL, MongoDB, MySQL, MS SQL and DynamoDB, from schema design to query tuning. Alongside hands-on development, I lead and mentor developers: I plan and divide sprint work, review code, set testing standards and help teammates unblock problems so releases ship on schedule. I have shipped products end to end, from SaaS platforms and an eCommerce system to a loyalty app published on the Shopify App Store. On my own time I build AI projects, including agentic workflows, LLM integrations with the OpenAI API and RAG on pgvector. I care about tested, readable code and working closely with design, QA and product teams.

SKILLS

Backend: Node.js, Express, NestJS, REST APIs, GraphQL, Microservices, Event-Driven Architecture, WebSockets, Apache Kafka, AWS SQS, AWS SNS

Frontend: React.js (hooks, state management), JavaScript (ES6+), TypeScript, HTML5, CSS3

Cloud & DevOps: AWS (Lambda, API Gateway, EC2, ECS, S3, SQS, SNS, DynamoDB, CloudWatch), AWS CDK, CloudFormation, Serverless, Docker, Kubernetes, CI/CD, Git, GitHub

Databases: PostgreSQL, MongoDB, MySQL, MS SQL Server, DynamoDB, Redis, schema design, indexing, query optimization, ORM and raw SQL

E-commerce: Shopify app development, Shopify APIs, webhooks, third-party app integrations, loyalty and rewards systems

Security: OAuth 2.0, JWT, session management, API security, scalable application design

AI / GenAI: Agentic AI, AI agents, LangChain, LangGraph, tool and function calling, Generative AI, LLM integration, OpenAI API (GPT), prompt engineering, Retrieval-Augmented Generation (RAG), vector databases, pgvector (personal projects)

Architecture: Microservices, event-driven design, serverless architecture, system design, design patterns, scalable API design, third-party API integration

Monitoring & Performance: AWS CloudWatch, logging, debugging, performance tuning, query optimization, caching with Redis

Testing & Process: Unit testing, integration testing, code review, mentoring, sprint planning, Agile/Scrum, cross-team collaboration

EXPERIENCE

Senior Software Engineer, Mindpath Tech Pvt. Ltd., Indore, MP Jan 2022 – Present

- Build backend services and APIs in NestJS and TypeScript on AWS serverless; the endpoints serve both web and mobile clients.
- Moved inter-service communication onto Apache Kafka and AWS SQS/SNS, which loosened coupling between services and made them hold up better under production load.
- Define Lambda, API Gateway, DynamoDB, EC2 and S3 resources in AWS CDK so deployments are repeatable and run through CI/CD pipelines.
- Configure Kubernetes deployments and Docker-based CI/CD pipelines for consistent, repeatable releases.
- Work with DynamoDB and MongoDB to build secure, highly available applications, with a focus on performance and data integrity.
- Integrated third-party REST APIs (Hippo, Icabbi, Zoho) for dispatch and CRM workflows, covering authentication, error handling and data synchronization.
- Set unit and integration testing standards for the team, and trace and fix production performance problems.
- Guide and mentor developers on the team: split sprint work, run code reviews and help resolve technical blockers.
- Work with frontend, QA and product teams in Agile/Scrum (sprint planning, standups, retrospectives) and deliver on schedule.

Software Developer, Bit-7 Informatics Pvt. Ltd., Bhopal, MP Sep 2018 – Dec 2021

- Built REST APIs for core business logic using Node.js, PHP, JavaScript, MySQL and MongoDB.
- Designed normalized SQL schemas and tuned queries with indexing to support complex business rules.
- Turned business requirements into technical specifications and REST API designs, working with stakeholders in an Agile setup.
- Tested, debugged and optimized production applications, reducing load times and improving reliability.

Guest Lecturer, Computer Science, Government Polytechnic Engineering College, Nowgong, MP Jul 2014 – Jun 2015

- Taught programming, data structures and web technologies; wrote course materials and mentored students on academics and careers.

PROJECTS

ZIZO, Performance Management Platform (playzizo.com) | *Node.js, TypeScript, React.js, PostgreSQL, AWS Lambda, ECS, CDK, CloudWatch, Kafka, SQS, API Gateway*

- Designed and built REST APIs for a performance management platform with real-time analytics, and integrated an analytics dashboard for tracking performance.
- Built event-driven microservices with Kafka and SQS on Lambda and ECS, with an auto-scaling serverless setup in AWS CDK for cost control and high availability, monitored in CloudWatch.
- Currently building the React.js application used to manage performance metrics and platform configuration.

- Exposed services through API Gateway and Lambda, with all infrastructure defined in AWS CDK so environments can be recreated the same way every time.
- Set up CloudWatch monitoring and logs across the services so failures and slow paths could be spotted and traced quickly.
- Used PostgreSQL to store performance and platform data, and tuned queries behind the analytics views.

BrandLift: Points Program, Shopify Loyalty App (apps.shopify.com/brandlift-loyalty-app) | *Node.js, TypeScript, Shopify App, REST APIs, Webhooks, OAuth 2.0*

- Built and published a points-based loyalty app on the Shopify App Store that lets merchants reward customers for purchases, reviews and social actions, with referral programs, VIP tiers and store credit.
- Added a merchant dashboard with analytics and configurable point values, ready-made campaigns, and integrations with Klaviyo, Drip, Loox, Postscript, Reviews.io and SMS Bump.
- Handled Shopify store data (customers, orders, discounts) through the Shopify APIs and webhooks, with tiered subscription plans and checkout points redemption for Shopify Plus.
- Built the points logic for earning on purchases, reviews and social actions, and redeeming as discounts, coupons and store credit.
- Added merchant controls for branding, a dedicated loyalty page and reward settings, so stores can run the program without writing code.

SLN, Custom eCommerce Platform (slnofficial.com) | *NestJS, TypeScript, PostgreSQL, GraphQL, MongoDB, React.js*

- Built GraphQL and REST APIs for catalog, inventory, pricing and orders, plus a React.js admin dashboard.
- Implemented checkout and payments secured with OAuth 2.0/JWT, with third-party integrations for order fulfillment; tuned PostgreSQL and MongoDB queries for product search and filtering.
- Built the NestJS backend in separate modules for catalog, inventory, pricing and orders, which keeps each area easier to test and change.
- Handled authentication and access control for the admin dashboard and customer-facing flows using OAuth 2.0 and JWT.
- Used PostgreSQL and MongoDB together, choosing each based on the shape of the data and how it is queried.

Co-optaxi, Taxi Booking Platform (co-optaxi.com) | *Node.js, TypeScript, PHP, MySQL, Docker*

- Integrated Hippo and Icabbi dispatch APIs for automated ride allocation and built real-time tracking and dynamic fare pricing.
- Built a PHP and MySQL admin panel for fleet management and reporting, and fixed production issues across driver and rider interfaces.
- Handled errors and kept booking data in sync with the Hippo and Icabbi dispatch systems, so rides were not lost or duplicated.
- Containerized the services with Docker for consistent setups across development and production.

University Portals (exam.bucgexam.in, bvvjdpexam.in, snpvraigarh.in) | *PHP, MySQL, Bootstrap*

- Built portals for students, faculty and staff at several institutions covering course scheduling, exam publishing and communication.
- Designed MySQL schemas for users, courses and exams, with separate access for students, faculty and staff.
- Built responsive Bootstrap interfaces so the portals work on phones as well as desktops.

AI Content Assistant (personal project) | *Node.js, OpenAI API (GPT), LangChain*

- Built an assistant on the OpenAI API (GPT models) that generates personalized content recommendations.
- Wrote and refined prompts, and handled the API calls, responses and errors in a Node.js backend.
- Used user preferences and context as input so the suggestions differ from person to person.

RAG Search Tool (personal project) | *Node.js, PostgreSQL (pgvector), OpenAI API, LangGraph*

- Built a Retrieval-Augmented Generation search tool: pgvector stores the embeddings, the OpenAI API handles embeddings and answers, so users can search their own data.
- Split documents into chunks, created embeddings and stored them in pgvector, then ran similarity search to find the closest matches for each question.
- Passed the retrieved text to GPT as context so answers rely on the user's own data instead of the model's general knowledge.

EDUCATION & CERTIFICATION

Bachelor of Engineering, Computer Science & Engineering Jul 2011 – Jun 2014
Technocrats Institute of Technology (RGPV University), Bhopal
AWS Certified Solutions Architect – Associate (in progress)
